

Priyansu Biswal

1915 Sand Creek Rd, Cedar Park, TX 78613 | (210) 396-6647 | pribiswal7@gmail.com

EDUCATION

Texas A&M University

B.S. in Computer Science (Engineering Honors)

College Station, TX

Expected May 2028

- **GPA:** 3.5/4.00
- **Relevant Coursework:** Program Design & Concepts, Multivariable Calculus

EXPERIENCE

Software Developer

Aggies Create – Finch

Jan. 2026 – Present

College Station, TX

- Architected a four-layer ATS-detection system for a Chrome extension autofilling job applications across 17 platforms (Greenhouse, Lever, Workday, Ashby, iCIMS), combining hand-tuned selectors, a weighted heuristic field-matcher, and an LLM fallback to extend reliable autofill to any career site
- Cut resume-enrichment latency 25% (120s → 90s) by benchmarking a Claude Sonnet-to-Haiku substitution across 8 profile types and building an adaptive parallel-execution pipeline with career-stage routing, with no quality regression

Quant Engineer – Backtesting Team

Maroon Fund at Texas A&M

Jan. 2026 – Present

College Station, TX

- Built a reproducible backtesting pipeline with SPY-aligned alpha, beta, volatility, and drawdown analytics, generating a 40.4% AMZN backtest return vs. -10.7% buy-and-hold (1.10 Sharpe, 15.0% max drawdown)

PROJECTS

Next Up | *Python, Computer Vision, YOLO, Ultralytics*

2025 – Present

- Built a browser-based annotation pipeline to label high-school game footage with 22 court keypoints and occlusion states, continuously fine-tuning a YOLO11n-pose model to raise validation mAP50–95 from 16.6% to 51.2% (+34.6 pts)
- Built an event-recognition pipeline combining player/ball tracking and court-pose models to segment possessions and detect shot attempts from game film, extending into a scouting platform for high-school basketball

High School Athletes API | *Python, FastAPI, PostgreSQL, SQLAlchemy, Beautiful Soup*

2026 – Present

- Built a versioned FastAPI REST API with Pydantic/OpenAPI contracts and cursor pagination, exposing athlete profiles, game logs, splits, rolling trends, and 20+ advanced basketball metrics backed by PostgreSQL and SQLAlchemy
- Engineered a multi-source web-scraping and ETL pipeline with Requests and Beautiful Soup to extract Overtime Elite and Nike EYBL Scholastic rosters and box scores, normalize player identities, and idempotently upsert validated data with source-level provenance
- Optimized filter and sort queries with indexed PostgreSQL materialized views and a shared SQL metric layer; verified scraping, ingestion, API contracts, and edge-case calculations with 89 automated tests and Alembic migrations

Janus | *C++, Node.js, React, WebSockets*

2026 – Present

- Engineered a C++ high-frequency arbitrage engine aggregating real-time Polymarket and Kalshi order books to detect spread discrepancies with sub-10ms latency
- Built a Node.js middleware bridge broadcasting live arbitrage opportunities to a React/WebSockets frontend, and implemented a maker-taker execution strategy with automated risk checks and exposure limits

FleetOS | *FastAPI, Next.js, PostgreSQL, Docker, AWS EC2*

2026 – Present

- Deployed a containerized fleet-operations intelligence platform on AWS EC2 and automated 24-hour ingestion of FMCSA Company Census carrier data, keeping carrier-intelligence records current
- Leveraged DAT and Truckstop load-board data with economic and regulatory constraints, plus real-time fleet vehicle locations, to recommend whether carriers should accept loads based on profitability, compliance, and deadhead exposure
- Built a 48-endpoint FastAPI REST API for dispatch, telemetry, carrier intelligence, and load-board integrations, enforcing Pydantic request/response contracts, Firebase JWT authentication, and fleet-scoped PostgreSQL queries for multi-tenant data isolation

AWARDS & HONORS

Cyber Cup Champion (2025): Top CyberPatriot team in Texas, recognized by San Antonio Mayor Ron Nirenberg; awarded a \$2,000 scholarship and an internship opportunity at Booz Allen Hamilton

National Finalist Certificate (2025): CyberPatriot national finalist

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C++

AI/ML: LLM Integration (OpenRouter), YOLO11, PyTorch, OpenCV, MediaPipe

Frameworks: FastAPI, React, Next.js, Node.js

Cloud/Tools: Docker, AWS, Git
